Importance: High

Gary –

Per our discussion this morning, the soil samples from beneath the manholes were collected yesterday and the results were just received (see attached summary table). Based on those results (ND, 0.035 J, 0.046 J ppm) we are requesting EPA concurrence to breach the liner beneath each manhole and backfill. We request expedited approval as there is rain anticipated over the next three days and we would like to close up the excavations as soon as possible. Please feel free to call if you have any questions. Thanks.

Bob, the approach is acceptable to EPA. As you indicated please sample each of the manholes. Thanks, Gary

Subject: Proposed Soil Sampling at Recycle Wet Well and Associated Manholes

Gary –

Attached please find a sampling plan for the recycle wet well and associated manholes. As discussed in last week's decommissioning meeting, the original plan as described in the facility demob plan was to abandon the wet well structure in place after sampling the concrete in-situ. Based on input from the property owner, we are now removing the structure. As a result we will instead sample the bedding material from beneath the structure and associated manholes. We will review the results with EPA before breaching the liner beneath the manholes. Please advise if you have any questions. Thanks.
